TELEPHOTO LENS

A TELEPHOTO lens on your movie camera will give the effect that a telescope does to the human eye. It magnifies—brings in distance—permits close-ups of near-by or far away objects.

Of course, to get the best results a good lens is vital, one that has speed—good covering power and even illumination. That is what helps to make photography fascinating and that is what is offered in the Wollensak Telephoto Lenses.

The simplicity of setting is an added advantage. Both the distance markings and diaphragm markings are controlled from one indicator which allows quick and accurate adjustment.

All Telephotos are finished in neat black lacquer, gold lettering and supplied with case and lens cap.

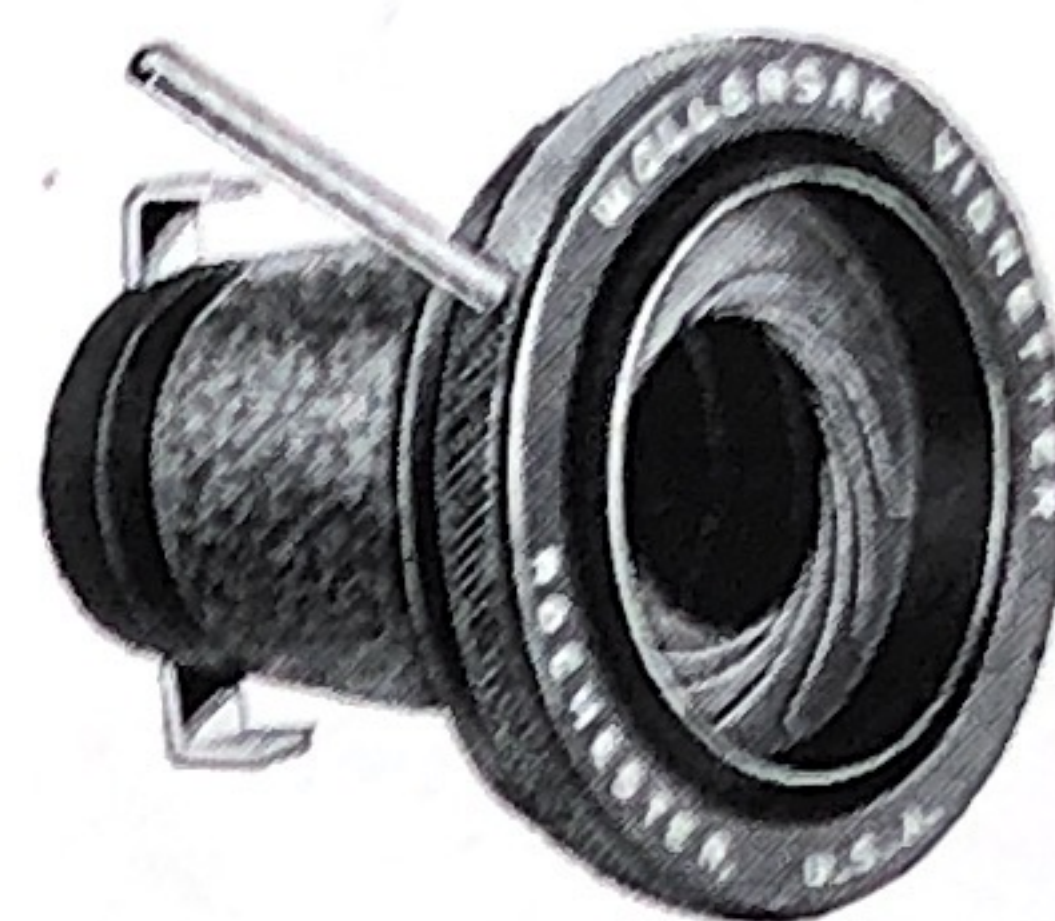

3" Focus f4.5 Wollensak Telephoto.....\$65.00

3 3/4" Focus f3.3 Wollensak Telephoto.. 75.00

6" Focus f4.5 Wollensak Telephoto..... 85.00

The 6" focus Telephoto can also be fitted to Bell & Howell Eyemo, DeVry and New York Institute of Photography Cameras.

When intended for Bell & Howell cameras prices include matched finder lenses to displace the regular units.

VIGNETTER

WITH a Vignetter attached to the lens, a gradual fade-out from the scene being photographed can be had by slowly closing down the iris. From a closed position of the Vignetter, a fade-in effect is had by slowly opening the iris on the scene being taken. The outcome is obvious, the fading in and out effect from one scene to another prepares the mind for the change and gives a most pleasing effect in the projection.

The Wollensak Vignetter closes up entirely and permits a *complete fade out*. The action is easy and positive and can be operated without jarring the camera, although the use of a tripod is recommended. It is quickly attached to the Filmo, screwing into the lens in place of the sunshade. On the Cine Kodak Model B f3.5 it is fastened into the oblong lens mask and held firmly in place by a stout snap spring *without any special fitting*. Two screw holes are provided in operating ring which permits the control pin to be placed in the most convenient position. A short shoulder on the front of the Vignetter will permit the use of a color filter if desired. Price \$10.00.

Vignettters with Special Fittings for All Other Sub-Standard Cine Cameras and Kodaks, \$15.00

MAKERS OF QUALITY PHOTOGRAPHIC LENSES FOR TWENTY-EIGHT YEARS

2X COLOR FILTERS

(NATURAL GLASS)

A COLOR FILTER reproduces colors in their true tonal relation to each other, rendering greater latitude and brilliancy in cloud, landscape and flower studies. When photographing marine, snow or beach scenes, a filter will prevent overtiming and halation.

Guaranteed not to fade or deteriorate under heat or extreme climatic conditions.

Code	Specifications	
A	To fit 20 m/m, 25 m/m and 1" Focus f3.5 Wollensak Cine Velostigmats	
	1" Focus f3.5 Cooke for Bell & Howell Filmo	\$2.50
