

Wollensak Raptars

16 mm
Cinesets

The most economical way
to buy the finest accessory
lenses...

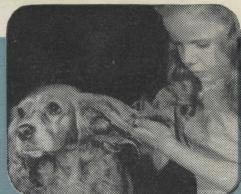

Better

more interesting movies made with Wollensak Raptar 16mm Cinesets

You just can't get around it, if you want better story telling movies...more thrilling Hollywood-type movies, you need accessory lenses. Only with a wide angle and a telephoto lens can you make natural home movie sequences...40 interesting seconds from the same camera position. Here's how! You need a general view (Wide Angle Raptar...9 seconds), a specific action shot (Normal Raptar...6 seconds), a candid close-up (Telephoto Raptar...10 seconds). Then perhaps another wide angle shot (8 seconds) and another telephoto shot (7 seconds). The

long shot tells you where the action is taking place; the medium shot tells what is happening and the close-up tells to whom it is happening. Nothing can be duller than 40 seconds of a person "mugging" at the camera.

For real economy, your best buy is a Wollensak 16 mm Cineset. Cinesets contain a Wollensak Raptar lens (wide angle or telephoto), a compensating finder, and a coated, optical glass haze filter. Cinesets are priced below the individual units if purchased singly.
